

API_publicity sequence

isthereaWallet

- Checks if is the first time Dapp used, if so, ask for a user wallet and save on DB, and create the script of developorer's wallet plus user's wallet: function: isthereaWallet

-

get_publicity_tokens

- Fired on start up and on newBalance event if there is a script registered.

-Get all tokens of scripts's address, divide them between minimas and Advetising tokens, and set them on memory Object:

```
var
USER_PUBLICITY_TOKENS
={
  tokens:[],
  minimas:[]
}
```

displayPublicity

- Check if there are any publicity tokens on the script on the memory object: USER_PUBLICITY_TOKENS

if so, show publicity on the html page section designated for.

get_publiciy_token_rewards

- Fired when the user clicks over the publitiy shown.

- Look for the coinid clicked token on the memory object, fetch it.

- Get all the info from the token token and build a TX to pay out all parties according the values of state vars.

- Execute the TX
